

Northwest Water and Sewer Improvements

COLLEGE PARK, GA

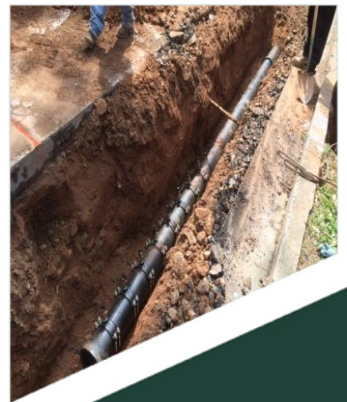

The historic neighborhood in College Park had many homes being serviced by an existing 1-1/2" water mains, as well as deteriorating sewer system. Site Engineering was awarded this project to upgrade the area to an 8" water main system and to repair and replace certain portions of the sewer main. Sewer repair and replacement methods used included pipe bursting, cured-in place pipe, open cut installation, and point repairs.
